

## Introducing a new lightweight all-in-one Jib-Tripod-Dolly-Trolley System—*The Porta-Jib Explorer* by Losmandy

Our new **Explorer System** provides the fastest set-up of any trolley or slider system. Simply remove two locking bolts from the upright support at the fulcrum to pivot the entire jib assembly 90 degrees. This transforms the arms of the jib into a 6 foot double rail for the **Explorer Trolley** to ride on. Add monopods to the end of the rails for stability, slide on the **Explorer Trolley** and within three minutes, transform your jib arm into an elevated trolley.

The **Explorer Jib** weighs only 22 lbs. and supports up to 25 lbs. of camera and fluid head.

The **Explorer Tripod** has a unique spreader and converts in minutes to become the **Explorer 3-Leg Dolly** by sliding on a set of our new wheel clusters that work as both track and floor wheels.

Our dovetail clamping system with spring-loaded pins ensures safe connections and allows for quick assembly and disassembly without tools.

Designed specifically for those on the go and on a budget. The components of the **Porta-Jib Explorer System** can be purchased as a complete system or as individual items.
