

The PD-1 Camera Dolly

from *Premier Studio Equipment, Inc.*

Specifically designed for the new light-weight DV, video, and 16mm Cameras.

The PD-1 gives you smooth up and down movement with no hydraulic or electrical system and no pumping. The secret is it's gas spring mechanism. Simply adjust the boom for the weight of your camera and panning head, (max. 75 lbs.) and the boom will move up and down like a jib arm.

The PD-1 is also very portable, it weighs just 125 lbs, and folds down to a compact 34" x 20" x 16" high, so it can easily fit into a car's trunk or hatchback.
